

250+ Important GK Questions for Class 3

JUNE 6, 2023

Share

250 important GK Questions for Class 3 will help you get an edge in general knowledge competitive exams and GK Olympiads (IGKO, SGKO). These GK questions for Class 3 are designed as per the previous year CBSE and Olympiad question papers.

Q1) What does family teach us?

- a) Sharing
- b) Help each other
- c) Work as a team
- d) All of the above

Answer: d) All of the above

Explanation: Family teaches us various values and skills such as helping each other, working as a team, and sharing. These values contribute to the well-being and harmony within the family unit.

Q2) Identify 'X' and 'Y' in the given context:

Family	Grandmother	'X'	Uncle
Nuclear family	Father	Children	'Y'

(a) X = Father, Y = Aunt

(b) X = Father, Y = Uncle

(c) X = Uncle, Y = Father

(d) X = Father, Y = Mother

Answer: (d) X = Father, Y = Mother

Explanation: A nuclear family typically consists of a father, mother, and children, while the extended family may include a grandmother and uncle.

Q3) Whenever a fire breaks out, where do we call?

a) Police station

b) Fire station

c) Post office

d) None of these

Answer: b) Fire station

Explanation: When a fire breaks out, we call the fire station for emergency assistance. Fire stations are equipped with firefighting personnel, equipment, and vehicles to respond to fires and provide rescue services.

Q4) Which is the smallest bone of the human body?

a) Stapes

b) Skull

c) Ribs

d) Femur

Answer: a) Stapes

Explanation: The stapes, also known as the stirrup, is the smallest bone in the human body. It is located in the middle ear and plays a crucial role in transmitting sound vibrations to the inner ear.

Q5) The people suffering from 'Arachnophobia' have a fear of _____.

a) Spiders

- b) Heights
- c) Water
- d) None of these

Answer: a) Spiders

Explanation: 'Arachnophobia' is the fear of spiders. Individuals with arachnophobia experience intense fear, anxiety, and avoidance when encountering spiders or even thinking about them.

Q6) If Aman is the brother of Naman and Daman is the daughter of Naman, then how is Aman related to Daman?

- a) Uncle
- b) Father
- c) Brother
- d) None of these

Answer: c) Brother

Explanation: Aman and Daman share the same father, Naman. Therefore, Aman is the brother of Daman.

Q7) Which of the following is not a holy book of Hindus?

- a) The Bible
- b) The Ramayana
- c) The Bhagavad Gita
- d) None of these

Answer: a) The Bible

Explanation: The Bible is not considered a holy book of Hindus. The holy books of Hindus include the Ramayana, the Bhagavad Gita, and others that are central to Hindu religious and philosophical teachings.

Q8) Identify 'X' and 'Y' in the given context:

Christians	'X'	The Bible
Sikhs	Kirtans	'Y'

(a) X = Bhajan, Y = The Quran

(b) X = Service, Y = The Guru Granth Sahib

(c) X = Namaz, Y = The Gita

Answer: (b) X = Service, Y = The Guru Granth Sahib

Explanation: In the given context, 'X' represents the service aspect in Christianity, and 'Y' represents the holy book of Sikhs, which is The Guru Granth Sahib. Kirtans are devotional songs sung in praise of God in the Sikh tradition.

Q9) Why do we breathe faster after running?

a) We require more oxygen after running.

b) We require less oxygen after running.

c) We require a lot of energy after running.

d) All of these.

Answer: a) We require more oxygen after running.

Explanation: After running or engaging in physical activity, our body's demand for oxygen increases to meet the higher energy requirements. As a result, we breathe faster to intake more oxygen and deliver it to the muscles.

Q10) How does the blood travel through the body?

a) Through tubes called vessels.

b) Through the spine.

c) Through the intestines.

d) Through the nerves.

Answer: a) Through tubes called vessels.

Explanation: Blood travels throughout the body through a network of tubes called blood vessels. These vessels include arteries, veins, and capillaries, which transport oxygen, nutrients, and waste products to and from various tissues and organs.

Q11) Which system helps to produce young ones?

- a) Reproductive
- b) Excretory
- c) Respiratory
- d) Circulatory

Answer: a) Reproductive

Explanation: The reproductive system is responsible for producing young ones in living organisms. It includes organs and structures involved in sexual reproduction, such as the ovaries, testes, uterus, and sperm or egg cells.

Q12) Which type of dwelling is commonly found in cold and forest regions?

- a) Wooden house
- b) Stilt house
- c) Caravan
- d) Houseboat

Answer: b) Stilt house

Explanation: Stilt houses, such as log cabins or elevated wooden structures, are often found in cold and forest regions. They provide insulation and protection against the cold weather and forest environments.

Q13) What is the term used for the weekly markets in our neighborhood?

- a) Haats
- b) Grocery shop
- c) Bakery
- d) Milk booth

Answer: a) Haats

Explanation: Haats refer to the weekly markets commonly found in local neighborhoods. They are often bustling with vendors selling various goods, including fresh produce, clothing, handicrafts, and more.

Q14) Match the following:

A.	Chacha	1.	Mother’s parents
B.	Maternal grandparents	2.	Father’s brother
C.	Mama	3.	Father’s sister
D.	Bua	4.	Mother’s brother

(a) A-2; B-1; C-4; D-3

(b) A-1; B-3; C-4; D-2

(c) A-4; B-3; C-2; D-1

(d) A-2; B-1; C-3; D-4

Answer: (a) A-2; B-1; C-4; D-3

Explanation: In the given matching, 'A' corresponds to Chacha (Father's brother), 'B' corresponds to Maternal grandparents (Mother's parents), 'C' corresponds to Mama (Mother's brother), and 'D' corresponds to Bua (Father's sister).

Q15) What is the result of the reaction between oxygen and digested food in our body?

a) Energy

b) All of these

c) Minerals

d) Vitamins

Answer: a) Energy

Explanation: The reaction between oxygen and digested food in our body produces energy. This energy is utilized by our cells for various physiological processes and activities.

Q16) Which one of the following is **WRONGLY classified?**

- a) Digestive System → Stomach, Skeletal System → Skull
- b) Digestive System → Mouth, Skeletal System → Ribcage
- c) Digestive System → Large Intestine, Skeletal System → Spine
- d) Digestive System → Nostril, Skeletal System → Heart

Answer: d) Digestive System → Nostril, Skeletal System → Heart

Explanation: The classification in option d) is incorrect. Nostrils are part of the respiratory system, not the digestive system. The heart is part of the circulatory system, not the skeletal system.

Q17) The bone present inside the head is called

- a) Skull
- b) Spine
- c) Ribcage
- d) None of these

Answer: a) Skull

Explanation: The bone present inside the head is called the skull. It protects the brain and provides structure and support to the head.

Q18) What is a larger family with grandparents, uncles, aunts, and cousins called?

- a) Joint family
- b) Nuclear family
- c) Single-parent family
- d) None of these

Answer: a) Joint family

Explanation: A larger family with grandparents, uncles, aunts, and cousins is called a joint family. In a joint family, multiple generations live together and share resources and responsibilities.

Q19) What is a Christian prayer called?

- a) Service
- b) Priest
- c) Duty
- d) All of these

Answer: b) Priest

Explanation: A Christian prayer is not called a "service" or a "duty." It is typically led by a religious leader known as a priest or clergy member.

Q20) I study stars, planets, moons, comets, and galaxies. Who am I?

- a) Geologist
- b) Astronomer
- c) Astrologer
- d) Meteorologist

Answer: b) Astronomer

Explanation: Astronomers, like Carl Sagan or Neil deGrasse Tyson, are scientists who study celestial objects such as stars, planets, moons, comets, and galaxies. They observe, analyze, and research these objects to gain a better understanding of the universe.

Q21) Father's father-in-law is your

- a) Paternal grandfather
- b) Maternal grandfather
- c) Great grandfather
- d) Maternal uncle

Answer: c) Great grandfather

Explanation: Father's father-in-law is the husband of one's grandmother. For example, if your grandmother's husband is named John, then John would be your great grandfather.

Q22) A person who studies various aspects of humans within present and past societies is called an

- a) Archaeologist
- b) Anthropologist
- c) Astronomer
- d) Astrologer

Answer: b) Anthropologist

Explanation: Anthropologists, such as Jane Goodall or Margaret Mead, study various aspects of humans, including their behavior, cultures, societies, and physical characteristics. They analyze present and past societies to understand human diversity, evolution, and social dynamics.

Q23) The salivary glands produce saliva. What is the function of saliva?

- a) Digestion of food
- b) Purification of blood
- c) Keeping our body cool
- d) None of these

Answer: a) Digestion of food

Explanation: Saliva plays a crucial role in the digestion of food. For example, enzymes in saliva, like amylase, break down food particles and initiate the digestion process in the mouth. Saliva also lubricates the food, making it easier to swallow.

Q24) Which muscles are the busiest in the human body?

- a) Cheek muscles
- b) Eye muscles
- c) Hand muscles
- d) Leg muscles

Answer: b) Eye muscles

Explanation: Eye muscles are the busiest muscles in the body. Scientists estimate they may move more than 100,000 times a day.

Q25) What do we call the conical tent made of animal skin?

- a) Teepee
- b) Tape
- c) Canvas
- d) Caravan

Answer: a) Teepee

Explanation: The conical tent made of animal skin is commonly known as a "teepee." It has been traditionally used by various indigenous cultures for shelter.

Q26) Which of the following constitutes our breathing system?

- a) Mouth, nose, and windpipe
- b) Mouth and lungs
- c) Stomach, mouth, and windpipe
- d) Nose, windpipe, and lungs

Answer: d) Nose, windpipe, and lungs

Explanation: Our breathing system consists of the nose, windpipe (trachea), and lungs. The nose filters and warms the air, the windpipe directs the air to the lungs, and the lungs are responsible for the exchange of oxygen and carbon dioxide.

Q27) Which is the largest bone of the human body?

- a) Stapes
- b) Skull
- c) Ribs
- d) Femur

Answer: d) Femur

Explanation: The femur, also known as the thigh bone, is the largest bone in the human body. It is located in the upper leg and plays a crucial role in supporting body weight and facilitating movement.

Q28) Which organ of our body belongs to both the respiratory and the excretory systems?

- a) Lungs
- b) Skin
- c) Kidneys
- d) Intestine

Answer: a) Lungs

Explanation: The lungs belong to both the respiratory and excretory systems. They play a vital role in oxygen exchange for respiration and the removal of carbon dioxide, a waste product, from the body.

Q29) Which of the following senses works for a tiger in the night?

- a) Sense of touch
- b) Sense of smell
- c) Sense of sight
- d) All of these

Answer: b) Sense of smell

Explanation: The tigers have a strong sense of smell which they use to find their preys in the dark night.

Q30) Find the odd one out:

- a) Father
- b) Doctor
- c) Uncle
- d) Brother

Answer: b) Doctor

Explanation: The odd one out is "Doctor" as the other options (Father, Uncle, Brother) are all family relationships, while "Doctor" is a profession.

Q31) The Holy Quran is kept in:

- a) Church
- b) Temple
- c) Mosque
- d) Gurudwara

Answer: c) Mosque

Explanation: The Holy Quran, the central religious text of Islam, is typically kept and revered in a mosque.

Q32) Which of these statements is true?

Statement A: Tongue tells us whether the food is bitter, sour, sweet or salty.

Statement B: There are more people with brown eyes as compared to green eyes.

- a) Statement A is true
- b) Statement B is true
- c) Both statements A and B are true
- d) Both statements are false

Answer: c) Both statements A and B are true

Explanation: Statement A is true as the taste buds on the tongue help us perceive the basic tastes. Statement B is also true as brown eyes are more prevalent in the global population compared to green eyes.

Q33) Housefly is a/an _____ animal.

- a) Terrestrial
- b) Aerial
- c) Arboreal
- d) Amphibian

Answer: b) Aerial

Explanation: Houseflies are aerial animals, meaning they are adapted to live and move in the air.

Q34) _____ is the ability of an organism to adjust to its outside environment.

- a) Adaptation
- b) Habitat
- c) Scavenging
- d) Arboreal

Answer: a) Adaptation

Explanation: Adaptation is the characteristic feature of an organism to cope with the environmental conditions it inhabits.

Q35) Lice is a _____.

- a) Scavenger
- b) Parasite
- c) Producer
- d) Carnivore

Answer: b) Parasite

Explanation: Lice are parasitic insects that live and feed on the blood of their hosts.

Q36) _____ is grown on the slopes of hills.

- a) Sugarcane
- b) Tea
- c) Rice
- d) Mango

Answer: b) Tea

Explanation: Tea plants are commonly grown on the slopes of hills in many regions around the world.

Q37) The bird shown in the picture is famous for its long-distance migration between the North and South poles. Identify this bird:

- a) Siberian crane
- b) Amur Falcon
- c) Arctic tern
- d) Flamingo

Answer: c) Arctic tern

Explanation: The Arctic tern is known for its incredible long-distance migration between its breeding grounds in the Arctic and its non-breeding grounds near the Antarctic.

Q38) Among the following, which feature is not found in dolphins?

- a) Giving birth to young ones.
- b) Laying eggs.
- c) Possessing fins.
- d) None of these.

Answer: b) Laying eggs.

Explanation: Dolphins are known to be mammals, and they give birth to live young ones, unlike animals that lay eggs such as birds and reptiles.

Q39) Which plant's roots are edible?

- a) Sugarcane

- b) Strawberry
- c) Carrot
- d) Mint

Answer: c) Carrot

Explanation: Carrots have edible taproots that are commonly consumed as vegetables.

Q40) Which of the following is NOT an aquatic plant?

- a) Hydrilla
- b) Duck potato
- c) Eucalyptus
- d) Wild rice

Answer: c) Eucalyptus

Explanation: Unlike Hydrilla, Duck potato, and Wild rice, which are aquatic plants, Eucalyptus is not adapted to grow in water.

Q41) What is the storehouse of the plant?

- a) Stem
- b) Leaf
- c) Flower
- d) Fruit

Answer: d) Fruit

Explanation: The fruit is the part of the plant that usually contains seeds and serves as a protective covering and means of dispersal for the seeds.

Q42) Which of these animals is not an omnivore?

- a) Cat
- b) Rat
- c) Mosquito

d) Crow

Answer: c) Mosquito

Explanation: While cats, rats, and crows are omnivores, mosquitoes are primarily herbivores that feed on plant nectar and fruit juices. However, some female mosquitoes may also consume blood for egg development.

Q43) Among these options, which animal is extinct?

a) Sabre-toothed cat

b) Porpoise

c) Salamander

d) Tasmanian devil

Answer: a) Sabre-toothed cat

Explanation: The Sabre-toothed cat is an extinct animal that lived during the prehistoric times and is known for its long, curved canine teeth.

Q44) Which of the following statements is true?

a) Mangroves grow in coastal areas.

b) Grasses are flowering plants with hollow stems.

c) Cocoa and tea plants grow on the slopes of hills.

Answer: a) Mangroves grow in coastal areas.

Explanation: Mangroves are trees or shrubs that grow in coastal saline or brackish water. They have specialized roots and can tolerate saltwater.

Q45) Which fruit is edible and contains one seed?

a) Mango

b) Durian

c) Angsana

d) Tomato

Answer: a) Mango

Explanation: Mango is an edible fruit that typically contains a single large seed, also known as the stone or pit.

Q46) The main stem of a tree is known as the trunk, which divides into numerous branches higher up the tree. The _____ of the tree safeguards the trunk.

- a) Stem
- b) Bark
- c) Pigment
- d) Roots

Answer: b) Bark

Explanation: The bark of the tree acts as a protective layer for the trunk, safeguarding it from external elements and potential damage.

Q47) Earthworms reside in the soil and are usually observed crawling on the ground after _____.

- a) Rain
- b) Drought
- c) Snowfall
- d) None of these

Answer: a) Rain

Explanation: Earthworms often come to the surface after rain, and their movement can be observed crawling on the ground.

Q48). Which of the following birds was used for communication purpose in ancient times?

- a) Parrot
- b) Crow
- c) Pigeon
- d) Sparrow

Answer: c) Pigeon

Explanation: Pigeons were used for communication purposes in ancient times. They were trained to carry messages over long distances.

Q49). People in the village use _____ for carrying loads.

- a) Car
- b) Bullock cart
- c) Train
- d) Ship

Answer: b) Bullock cart

Explanation: People in villages often use bullock carts for carrying loads as a traditional means of transportation.

Q50). The oldest means of communication

- a) Postcard
- b) Telegram
- c) Pigeon
- d) Mobile

Answer: c) Pigeon

Explanation: Pigeon communication is considered one of the oldest means of sending messages over long distances.

Q51). Goods trains are used to carry loads of

- a) People
- b) Things
- c) Both a and b
- d) None of these

Answer: b) Things

Explanation: Goods trains are primarily used for transporting various types of goods and commodities.

Q52). Match the columns:

Column I	Column II
(I) Bus	(i) Sea transport
(II) Aeroplane	(ii) Road transport
(III) Train	(iii) Air transport
(IV) Ship	(iv) Railway transport

Answer: b) (I) – (ii), (II) – (iii), (III) – (iv), (IV) – (i)

Explanation: The correct matching of transport types is: (I) Bus – (ii) Road transport, (II) Aeroplane – (iii) Air transport, (III) Train – (iv) Railway transport, (IV) Ship – (i) Sea transport.

Q53). Which of the following are methods of mass communication?

- a) Internet
- b) Postcard
- c) Television
- d) Telephone
- e) Radio
- f) Newspaper
- g) Fax

Answer: d) 1, 3, 5, 6 only

Explanation: The methods of mass communication are Internet, Television, Radio, and Newspaper.

Q54). What is the emergency number one must dial in case of a road accident in India?

- a) 102
- b) 139

c) 101

d) 181

Answer: c) 101

Explanation: In India, the emergency number to dial in case of a road accident is 101.

Q55). A fax is used to:

a) Signal

b) Communicate with dolphins

c) Send and receive copies of printed or written matter

d) Understand the communication between plants and animals

Answer: c) Send and receive copies of printed or written matter

Explanation: A fax machine is used to send and receive copies of printed or written matter over a telephone line.

Q56) You can travel through the desert by sitting on me.

a) Computer

b) Hen

c) Camel

d) None of these

Answer: c) Camel

Explanation: Camels are known for their ability to travel long distances through deserts, and they have been used as transportation in desert regions for centuries.

Q57). Today's world depends mainly on:

a) Post

b) Telephone

c) Internet

d) All of these

Answer: c) Internet

Explanation: Today's world heavily relies on the Internet for communication, information, and various other activities.

Q58). On letters, we have to:

- a) Write the address to whom the letter is posted.
- b) Paste our picture.
- c) We don't need to write anything.
- d) None of these

Answer: a) Write the address to whom the letter is posted.

Explanation: When sending letters, we need to write the address of the recipient on the envelope or package.

Q59). What is the state of matter in which metals are present in the outer core of Earth?

- a) Solid
- b) Liquid
- c) Gas
- d) A combination of all the states of matter

Answer: b) Liquid

Explanation: The metals in the outer core of the Earth exist in a liquid state due to the high temperature and pressure prevailing in that region.

Q60). What are the primary components of the inner core of Earth?

- a) Nickel
- b) Alumina
- c) Silica
- d) Nitrogen

Answer: a) Nickel

Explanation: The inner core of the Earth is mainly composed of iron and nickel.

Q61). Which part of the Earth is known to be the hottest?

- a) Inner core
- b) Outer core
- c) Mantle
- d) Crust

Answer: a) Inner core

Explanation: The inner core of the Earth is the hottest region on the planet, attributed to the immense pressure and temperature it experiences at its center.

Q62). What is Earth's position in relation to the Sun?

- a) First
- b) Second
- c) Third
- d) Fourth

Answer: c) Third

Explanation: Earth is the third planet from the Sun in our solar system.

Q63). What characteristic feature is unique to Earth?

- a) Rings around the planet
- b) Red planet
- c) Presence of life
- d) Has five natural satellites

Answer: c) Presence of life

Explanation: Earth stands apart from other known planets due to its exceptional attribute of supporting life.

Q64). In which layer of the Earth do we live in?

- a) Crust
- b) Core
- c) Mantle
- d) None of these

Answer: a) Crust

Explanation: We live on the Earth's crust, which is the outermost solid layer of the Earth.

Q65). What is the approximate thickness of the crust in the ocean floor?

- a) 2 km
- b) 5 km
- c) 10 km
- d) 25 km

Answer: b) 5 km

Explanation: The oceanic crust, found under the oceans, is approximately 5 kilometers thick.

Q66). What do we call the crust where we live?

- a) Continental crust
- b) Environmental crust
- c) Core crust
- d) Atmospheric crust

Answer: a) Continental crust

Explanation: The crust where we live, including the continents and landmasses, is called the continental crust.

Q67). What is the primary composition of the Earth's crust?

- a) Silica and iron
- b) Silica and alumina

c) Alumina and iron

d) none of these

Answer: b) Silica and alumina

Explanation: The Earth's crust is mainly composed of rocks containing silica and alumina, among other minerals.

Q68). Which layer of the Earth comes second after the crust?

a) Crust

b) Inner core

c) Mantle

d) Outer core

Answer: c) Mantle

Explanation: The mantle is the second layer of the Earth, lying below the crust and above the outer core.

Q69). What is the approximate depth of the Earth's mantle?

a) 1,000 km

b) 2,000 km

c) 2,500 km

d) 3,000 km

Answer: c) 2,500 km

Explanation: The mantle extends to a depth of approximately 2,500 kilometers beneath the Earth's surface.

Q70). Which layer of Earth is primarily composed of iron and nickel?

a) Crust

b) Continental crust

c) Mantle

d) Outer core

Answer: d) Outer core

Explanation: The outer core of the Earth is predominantly made up of iron and nickel.

Q71). The layer that protects us from harmful UV radiation is known as:

a) Ozone layer

b) Infrared layer

c) Carbon layer

d) Oxygen layer

Answer: a) Ozone layer

Explanation: The ozone layer is a region of Earth's stratosphere that contains a high concentration of ozone molecules. It plays a crucial role in absorbing harmful ultraviolet (UV) radiation from the sun, protecting life on Earth from its harmful effects.

Q72). The time taken by the Earth to complete one revolution around the sun is:

a) 1 hour

b) 1 day

c) 1 month

d) 1 year

Answer: d) 1 year

Explanation: The Earth takes approximately 365.25 days to complete one full revolution around the sun. This period is known as a year, and it is the basis for our calendar system.

Q73). The Earth belongs to which of these categories?

a) Star

b) Satellite

c) Planet

d) Constellation

Answer: c) Planet

Explanation: The Earth is classified as a planet. It is the third planet from the sun in our solar system and is one of the few known celestial bodies that support life.

Q74). The energy of the Sun that we use on Earth is called:

- a) Electric energy
- b) Solar energy
- c) Heat energy
- d) Light energy

Answer: b) Solar energy

Explanation: The energy of the Sun that is harnessed and used on Earth is known as solar energy. Solar energy is converted into electricity or heat to power various applications, such as generating electricity, heating water, and more.

Q75. Which gas is most abundant in the Earth's atmosphere?

- a) Oxygen
- b) Nitrogen
- c) Carbon dioxide
- d) Argon

Answer: b) Nitrogen

Explanation: Nitrogen is the most abundant gas in the Earth's atmosphere, constituting about 78% of the total air volume.

Q76). Which planet in our Solar System is known as the "Red Planet"?

- a) Mercury
- b) Venus
- c) Mars
- d) Jupiter

Answer: c) Mars

Explanation: Mars is often referred to as the "Red Planet" due to its reddish appearance, which is caused by iron oxide (rust) on its surface.

Q77). What is the name of the largest moon of Saturn?

- a) Ganymede
- b) Titan
- c) Europa
- d) Triton

Answer: b) Titan

Explanation: Titan is the largest moon of Saturn and the second-largest moon in the Solar System. It is known for its thick atmosphere and hydrocarbon lakes.

Q78). The Great Barrier Reef, the world's largest coral reef system, is located off the coast of which country?

- a) Australia
- b) Brazil
- c) Indonesia
- d) Egypt

Answer: a) Australia

Explanation: The Great Barrier Reef is located off the northeastern coast of Australia and is a UNESCO World Heritage site famous for its biodiversity and coral formations.

Q79). Which planet in our Solar System is known as the "Morning Star" or "Evening Star" and is often the brightest object in the night sky after the Moon?

- a) Venus
- b) Jupiter
- c) Mars
- d) Saturn

Answer: a) Venus

Explanation: Venus, also known as the "Morning Star" or "Evening Star," is the second planet from the Sun and is often visible in the morning or evening sky due to its brightness.

Q80). I am the first member of the Solar system, revolving around the Sun. I am the smallest among all the other members. What am I?

- a) Earth
- b) Mercury
- c) Mars
- d) Jupiter

Answer: b) Mercury

Explanation: Mercury is the smallest planet in the Solar system and it revolves around the Sun, being the first planet from it.

Q81). Why are we able to see the Moon?

- a) It is a luminous object.
- b) It reflects the light of the Earth.
- c) It has a jungle of fireflies.
- d) It reflects the light of the Sun.

Answer: d) It reflects the light of the Sun.

Explanation: The Moon is visible to us because it reflects the light of the Sun, illuminating its surface which is then visible from the Earth.

Q82). Why do astronauts wear an oxygen mask on the Moon?

- a) There is no oxygen on the Moon.
- b) There are poisonous gases on the Moon.
- c) They want to be prepared for emergencies.
- d) They are afraid of the people living over there.

Answer: a) There is no oxygen on the Moon.

Explanation: Astronauts wear oxygen masks on the Moon because there is no breathable atmosphere on the lunar surface, lacking oxygen to support life.

Q83). Why is there no life on the Moon?

- a) It revolves around the Earth.
- b) It revolves around the Sun.
- c) It has no water and air.
- d) It has no light.

Answer: c) It has no water and air.

Explanation: Life on Earth is sustained by water and air, both of which are absent on the Moon, making it uninhabitable.

Q84). Among these letters of the English alphabet, which one does NOT resemble one of the phases of the Moon?

- a) C
- b) D
- c) A
- d) O

Answer: c) A

Explanation: While letters like C, D, and O resemble the shapes of various moon phases, the letter A does not have a similar resemblance.

Q85). I am the largest moon in the Solar system and I orbit around Jupiter. What am I?

- a) Titan
- b) Ganymede
- c) Enceladus
- d) Triton

Answer: b) Ganymede

Explanation: Ganymede is the largest moon in the Solar system and it orbits around Jupiter, the largest planet.

Q86). I am the closest star to Earth and the center of our Solar system. What am I?

- a) Alpha Centauri
- b) Sirius
- c) Proxima Centauri
- d) Sun

Answer: d) Sun

Explanation: The Sun is the closest star to Earth and it is the center of our Solar system.

Q87). I am a celestial body made up of ice, dust, and gas, known for my bright coma and tail when I approach the Sun. What am I?

- a) Asteroid
- b) Meteor
- c) Comet
- d) Planet

Answer: c) Comet

Explanation: Comets are celestial bodies made up of ice, dust, and gas. When they approach the Sun, they develop a bright coma and a tail due to the solar wind.

Q88). I am the second smallest planet in the Solar system and the closest to the Sun. I have a very thin atmosphere. What am I?

- a) Mercury
- b) Venus
- c) Mars
- d) Uranus

Answer: a) Mercury

Explanation: Mercury is the second smallest planet in the Solar system and it is the closest to the Sun. It has a very thin atmosphere.

Q89). I am the only planet in the Solar system that rotates on its side, causing extreme seasons. What am I?

- a) Saturn
- b) Uranus
- c) Neptune
- d) Jupiter

Answer: b) Uranus

Explanation: Uranus is the only planet in the Solar system that rotates on its side, causing extreme seasons.

Q90). I am the largest planet in the Solar system, known for my iconic giant red spot. What am I?

- a) Earth
- b) Mercury
- c) Mars
- d) Jupiter

Answer: d) Jupiter

Explanation: Jupiter is the largest planet in the Solar system and is characterized by its famous Great Red Spot, a massive storm in its atmosphere.

Q91). I am the fifth planet from the Sun and have a beautiful system of rings around me. What am I?

- a) Earth
- b) Venus
- c) Saturn
- d) Uranus

Answer: c) Saturn

Explanation: Saturn, the sixth planet from the Sun, is well-known for its spectacular system of rings composed of ice and dust particles.

Q92). I am the only planet in the Solar system known to support life. What am I?

- a) Earth
- b) Mercury
- c) Mars
- d) Neptune

Answer: a) Earth

Explanation: Earth is the third planet from the Sun and is the only known celestial body to support life as we know it.

Q93). I am the only planet in the Solar system with a thick atmosphere composed mainly of carbon dioxide. What am I?

- a) Earth
- b) Venus
- c) Mars
- d) Uranus

Answer: b) Venus

Explanation: Venus is the second planet from the Sun and is known for its extremely dense and hot atmosphere, primarily made up of carbon dioxide.

Q94). I am a small, rocky planet known for my thin atmosphere and extensive system of canyons. What am I?

- a) Earth
- b) Mercury
- c) Mars
- d) Neptune

Answer: c) Mars

Explanation: Mars, also known as the "Red Planet," is the fourth planet from the Sun and is characterized by its reddish appearance, canyons, and volcanoes.

Q95). What is the main gas responsible for the greenhouse effect on Earth?

- a) Oxygen
- b) Nitrogen
- c) Carbon dioxide
- d) Hydrogen

Answer: c) Carbon dioxide

Explanation: Carbon dioxide is the main gas responsible for the greenhouse effect on Earth. It traps heat in the atmosphere, leading to global warming and climate change.

Q96). What causes the seasons on Earth?

- a) Changes in the distance from the Sun.
- b) The tilt of the Earth's axis.
- c) The rotation of the Earth.
- d) The speed of the Earth's orbit around the Sun.

Answer: b) The tilt of the Earth's axis.

Explanation: The changing seasons on Earth are primarily caused by the tilt of its axis relative to its orbital plane around the Sun. This tilt results in varying amounts of sunlight reaching different parts of the Earth throughout the year.

Q97). What is the main gas responsible for the greenhouse effect on Earth?

- a) Oxygen
- b) Nitrogen
- c) Carbon dioxide
- d) Hydrogen

Answer: c) Carbon dioxide

Explanation: Carbon dioxide is the main gas responsible for the greenhouse effect on Earth. It traps heat in the atmosphere, leading to global warming and climate change.

Q98). What causes the tides in the oceans?

- a) The rotation of the Earth.
- b) The gravitational pull of the Moon.
- c) The gravitational pull of the Sun.
- d) The presence of underwater volcanoes.

Answer: b) The gravitational pull of the Moon.

Explanation: The tides in the oceans are primarily caused by the gravitational pull of the Moon on the Earth, creating bulges in the ocean waters.

Q99). What causes the seasons on Earth?

- a) Changes in the distance from the Sun.
- b) The tilt of the Earth's axis.
- c) The rotation of the Earth.
- d) The speed of the Earth's orbit around the Sun.

Answer: b) The tilt of the Earth's axis.

Explanation: The changing seasons on Earth are primarily caused by the tilt of its axis relative to its orbital plane around the Sun. This tilt results in varying amounts of sunlight reaching different parts of the Earth throughout the year.

Q100). What is the main gas responsible for the greenhouse effect on Earth?

- a) Oxygen
- b) Nitrogen
- c) Carbon dioxide
- d) Hydrogen

Answer: c) Carbon dioxide

Explanation: Carbon dioxide is the main gas responsible for the greenhouse effect on Earth. It traps heat in the atmosphere, leading to global warming and climate change.

Q101. Why is the sky blue during the day?

- a) It reflects blue light from the Sun.
- b) It emits blue light.
- c) It absorbs blue light from the Sun.
- d) It reflects all colors equally.

Answer: c) It absorbs blue light from the Sun.

Explanation: The sky appears blue during the day because the Earth's atmosphere scatters shorter wavelengths of light (blue) more effectively, causing the blue light from the Sun to be absorbed and scattered in all directions.

Q102. What causes the tides in the oceans?

- a) The rotation of the Earth.
- b) The gravitational pull of the Moon.
- c) The gravitational pull of the Sun.
- d) The presence of underwater volcanoes.

Answer: b) The gravitational pull of the Moon.

Explanation: The tides in the oceans are primarily caused by the gravitational pull of the Moon on the Earth, creating bulges in the ocean waters.

Q103. What causes the seasons on Earth?

- a) Changes in the distance from the Sun.
- b) The tilt of the Earth's axis.
- c) The rotation of the Earth.
- d) The speed of the Earth's orbit around the Sun.

Answer: b) The tilt of the Earth's axis.

Explanation: The changing seasons on Earth are primarily caused by the tilt of its axis relative to its orbital plane around the Sun. This tilt results in varying amounts of sunlight reaching different parts of the Earth throughout the year.

Q104). What is the main gas responsible for the greenhouse effect on Earth?

- a) Oxygen
- b) Nitrogen
- c) Carbon dioxide
- d) Hydrogen

Answer: c) Carbon dioxide

Explanation: Carbon dioxide is the main gas responsible for the greenhouse effect on Earth. It traps heat in the atmosphere, leading to global warming and climate change.

Q105). What causes the tides in the oceans?

- a) The rotation of the Earth.
- b) The gravitational pull of the Moon.
- c) The gravitational pull of the Sun.
- d) The presence of underwater volcanoes.

Answer: b) The gravitational pull of the Moon.

Explanation: The tides in the oceans are primarily caused by the gravitational pull of the Moon on the Earth, creating bulges in the ocean waters.

- d) Gujarat

Answer: c) Assam

Explanation: Mekhela Chador is the traditional dress of the state of Assam.

Q258). What celestial body is known as the "Evening Star" or the "Morning Star" and is often visible shortly after sunset or before sunrise?

- a) Mars
- b) Venus
- c) Mercury
- d) Saturn

Hint: This planet is the brightest natural object in the night sky and is often mistaken for a star.

Answer: b) Venus

Q259). What natural phenomenon occurs when the Earth's shadow falls on the Moon, causing the Moon to appear reddish-brown in color?

- a) Solar eclipse
- b) Lunar eclipse
- c) Shooting star
- d) Comet

Hint: This phenomenon happens during a full moon and involves the Earth, Moon, and Sun aligning in a specific way.

Answer: b) Lunar eclipse

Q260). Which gas, known for its distinct odor, is produced by lightning and is responsible for the fresh scent after a thunderstorm?

- a) Nitrogen
- b) Carbon dioxide
- c) Ozone
- d) Oxygen

Hint: This gas's chemical symbol is O₃, and it plays a crucial role in the Earth's atmosphere.

Answer: c) Ozone

Q261). What is the phenomenon in which light is separated into its component colors, producing a spectrum of colors?

- a) Reflection

- b) Diffraction
- c) Dispersion
- d) Refraction

Hint: This phenomenon occurs when light passes through a glass prism, resulting in a beautiful display of colors.

Answer: c) Dispersion

Q262). Which famous physicist is known for his theory of relativity and the equation $E=mc^2$?

- a) Isaac Newton
- b) Albert Einstein
- c) Galileo Galilei
- d) Nikola Tesla

Hint: This scientist's groundbreaking work revolutionized our understanding of space, time, and energy.

Answer: b) Albert Einstein

Q263). What is the world's largest and most populous continent, known for its diverse cultures and landscapes?

- a) Europe
- b) Africa
- c) Asia
- d) North America

Hint: This continent is home to over half of the world's population and includes countries like China and India.

Answer: c) Asia

Q264). What type of cloud is often described as a fluffy and white cloud with a flat base, indicating fair weather?

- a) Cumulus cloud

- b) Cirrus cloud
- c) Stratus cloud
- d) Nimbostratus cloud

Hint: These clouds are often likened to cotton balls and can resemble castles or mountains in the sky.

Answer: a) Cumulus cloud

Q265). What geological process involves the wearing away of rocks and soil by natural forces like wind, water, and ice?

- a) Volcanism
- b) Erosion
- c) Metamorphism
- d) Subduction

Hint: This process contributes to the formation of various landforms, such as valleys, canyons, and river deltas.

Answer: b) Erosion

Q266). Which ancient wonder is believed to have been a monumental tomb constructed for an Egyptian pharaoh?

- a) Great Wall of China
- b) Colosseum
- c) Statue of Zeus at Olympia
- d) Pyramids of Giza

Hint: These structures were constructed as grand tombs for the rulers of ancient Egypt and remain iconic landmarks today.

Answer: d) Pyramids of Giza

Q267). What is the scientific term for the process by which plants release excess water vapor into the air through their leaves?

- a) Transpiration
- b) Evaporation
- c) Sublimation
- d) Condensation

Hint: This process helps plants regulate their temperature and maintain moisture balance.

Answer: a) Transpiration

Q269). What is the unit of measurement for electric current?

- a) Volt
- b) Ampere
- c) Watt
- d) Ohm

Hint: This unit is named after a French physicist and mathematician who made significant contributions to the study of electricity and magnetism.

Answer: b) Ampere

Q270). What natural phenomenon, characterized by the rotation of air around a low-pressure center, is known by different names like "hurricane," "typhoon," or "cyclone" depending on the region?

- a) Blizzard
- b) Tornado
- c) Monsoon
- d) Tropical cyclone

Hint: These intense storms originate over warm ocean waters and can cause widespread destruction when they make landfall.

Answer: d) Tropical cyclone

Q271). What process involves the conversion of a solid directly into a gaseous state without passing through the liquid phase?

- a) Sublimation
- b) Evaporation
- c) Condensation
- d) Vaporization

Hint: This term is often used to describe the transformation of substances like dry ice (frozen carbon dioxide) into gas.

Answer: a) Sublimation

Q272). Which planet is known as the "Blue Planet" due to its abundant water and the presence of life?

- a) Mars
- b) Venus
- c) Earth
- d) Neptune

Hint: This is the only planet in our solar system known to support life and is characterized by its diverse ecosystems.

Answer: c) Earth

Q273). What process involves the gradual movement of Earth's tectonic plates, causing the continents to drift over millions of years?

- a) Erosion
- b) Volcanism
- c) Continental drift
- d) Earthquake

Hint: This concept was proposed by a German meteorologist and geophysicist in the early 20th century.

Answer: c) Continental drift

Q274). What ancient wonder is a massive sculpture of a mythical creature with a lion's body and a human head, guarding the Giza Plateau in Egypt?

- a) Colossus of Rhodes
- b) Great Sphinx of Giza
- c) Statue of Liberty
- d) Moai of Easter Island

Hint: This statue is believed to symbolize the strength and wisdom of the pharaohs.

Answer: b) Great Sphinx of Giza

Q275). What part of a plant is responsible for absorbing water and nutrients from the soil?

- a) Leaves
- b) Roots
- c) Stem
- d) Flowers

Hint: These parts of the plant are usually hidden beneath the soil and anchor the plant while facilitating nutrient uptake.

Answer: b) Roots

Q276). Which gas is the most abundant in Earth's atmosphere, making up about 78% of it?

- a) Oxygen
- b) Nitrogen
- c) Carbon dioxide
- d) Hydrogen

Hint: Despite being essential for life, this gas does not actively support combustion or breathing.

Answer: b) Nitrogen

Q277). Which famous scientist is credited with developing the theory of evolution by natural selection?

- a) Isaac Newton
- b) Albert Einstein
- c) Charles Darwin
- d) Galileo Galilei

Hint: This British naturalist conducted extensive research and wrote the groundbreaking book "On the Origin of Species."

Answer: c) Charles Darwin

Q278). What is the process by which plants convert light energy into chemical energy, producing glucose and oxygen?

- a) Transpiration
- b) Photosynthesis
- c) Respiration
- d) Germination

Hint: This essential process occurs in the chloroplasts of plant cells and plays a crucial role in the food chain.

Answer: b) Photosynthesis

Q279). What is the term for the line that divides the Earth into the Northern Hemisphere and the Southern Hemisphere?

- a) Equator
- b) Prime Meridian
- c) Tropic of Cancer
- d) Arctic Circle

Hint: This imaginary line is situated horizontally and runs around the Earth's middle.

Answer: a) Equator

Q280). What tiny particles, suspended in the air, scatter sunlight and create colorful displays in the sky?

- a) Raindrops
- b) Dust particles
- c) Molecules
- d) Airborne droplets

Hint: These particles contribute to the vibrant colors of sunrises, sunsets, and rainbows.

Answer: b) Dust particles

Q281). What is the term for the process by which liquid water changes into water vapor, primarily due to heat?

- a) Condensation
- b) Sublimation
- c) Evaporation
- d) Precipitation

Hint: This process is responsible for the formation of clouds and contributes to the Earth's water cycle.

Answer: c) Evaporation

Q282). What are the small, dense cores of comets that contain ice, dust, and gas?

- a) Meteors
- b) Asteroids
- c) Nuclei
- d) Neutrons

Hint: These objects become visible as "shooting stars" when they enter Earth's atmosphere and burn up.

Answer: c) Nuclei

Q283). Which planet is known as the "Red Planet" due to its reddish appearance?

- a) Venus

- b) Mars
- c) Jupiter
- d) Saturn

Hint: This planet has a thin atmosphere and distinctive features like polar ice caps and massive dust storms.

Answer: b) Mars

Q284). What is the process by which rocks and minerals are broken down into smaller particles by wind, water, and ice?

- a) Melting
- b) Erosion
- c) Subduction
- d) Volcanism

Hint: This process contributes to the creation of sediments, which can form new rocks over time.

Answer: b) Erosion

Q285). Which scientist introduced the concept of gravity and formulated the three laws of motion?

- a) Isaac Newton
- b) Galileo Galilei
- c) Nikola Tesla
- d) Albert Einstein

Hint: This physicist's apple-falling-under-a-tree incident led to the formulation of the law of universal gravitation.

Answer: a) Isaac Newton

Q286). What term describes the gradual transformation of a caterpillar into a butterfly?

- a) Evolution
- b) Metamorphosis

c) Adaptation

d) Fertilization

Hint: This process involves distinct stages, including egg, larva, pupa, and adult.

Answer: b) Metamorphosis

Q287). What natural occurrence is responsible for the tides in Earth's oceans?

a) Solar flares

b) Earth's rotation

c) Lunar eclipse

d) Gravitational pull of the Moon

Hint: This phenomenon is influenced by the gravitational interaction between Earth, the Moon, and the Sun.

Answer: d) Gravitational pull of the Moon

Q288). Which phenomenon involves the warming of the Earth's surface due to the trapping of heat by certain gases in the atmosphere?

a) Global cooling

b) Greenhouse effect

c) Solar radiation

d) Thermoregulation

Hint: This effect is crucial for maintaining Earth's temperature but can lead to climate change when intensified.

Answer: b) Greenhouse effect

Q289). What is the term for the layer of Earth's atmosphere that contains most of the weather phenomena and is where we live?

a) Troposphere

b) Stratosphere

c) Mesosphere

d) Exosphere

Hint: This layer is closest to the Earth's surface and is responsible for our weather conditions.

Answer: a) Troposphere

Q290). Which gas, vital for respiration, is released by plants during photosynthesis?

a) Oxygen

b) Nitrogen

c) Carbon dioxide

d) Hydrogen

Hint: This gas is essential for human and animal survival, and it's a product of the process that converts light energy into chemical energy in plants.

Answer: a) Oxygen

Q291). What is the phenomenon when the Moon comes directly between the Earth and the Sun, casting a shadow on the Earth?

a) Solar eclipse

b) Lunar eclipse

c) Crescent eclipse

d) Umbra eclipse

Hint: During this event, the Moon appears to cover the Sun partially or completely, leading to temporary darkness during the day.

Answer: a) Solar eclipse

Q292). What is the term for the measurement of the intensity of earthquakes?

a) Seismograph

b) Richter scale

c) Magnitude

d) Tremor scale

Hint: This measurement helps describe the energy released during an earthquake and its impact on structures.

Answer: c) Magnitude

Q293). Which gas, responsible for the brilliant colors of auroras, is found in the Earth's upper atmosphere?

- a) Nitrogen
- b) Carbon dioxide
- c) Oxygen
- d) Helium

Hint: This gas is most commonly associated with the green and pink hues of the Northern and Southern Lights.

Answer: a) Nitrogen

Q294). What phenomenon occurs when light changes direction as it passes from one medium to another, such as from air to water?

- a) Diffraction
- b) Reflection
- c) Dispersion
- d) Refraction

Hint: This phenomenon is responsible for the bending of light and creating optical illusions.

Answer: d) Refraction

Q295). What is the term for the process by which ice changes directly into water vapor without becoming a liquid?

- a) Evaporation
- b) Condensation
- c) Sublimation
- d) Vaporization

Hint: This process is often observed in freezing climates where ice can disappear without melting.

Answer: c) Sublimation
